

Hawk-Woods Adapts to Canon D7

Hawk-Woods have just announced a series of battery power adaptors for the Canon EOS D5 and D7 cameras. As those in the industry will know, these stills cameras are now being used prominently for their HD recording capabilities.

Hawk-Woods' DC-5D adaptors feature a cable mounted dummy LP-E6 type battery, which is linked to either a 2-pin D-Tap, or 4-Pin Hirose plug.

These adaptors allow the cameras to be powered from V-Lok (and other) types of battery when plugged into a suitable power output. This could be a rig mounted V-Lok plate, or stand alone V-Lok adaptor, like the Hawk-Woods VL-A1.

This is great news for users shooting HD video or time-lapse photography with either the D5 or D7, as the available run-time can be increased immensely. The advantages of using a single high capacity broadcast battery over dozens of standard Canon LP-E6 batteries are obvious.

The DC-5D1 (D-Tap version) and DC-5D2 (Hirose version) are available now from your preferred Hawk-Woods stockiest.
