

New 'Stubby' NP1

The NP-35 from Hawk-Woods is a unique new Lithium-Ion NP1 battery. It measures approximately half the height of an industry standard NP1 battery, providing sound recordists with a lightweight, space-saving solution.

Producing 35Watts of output, this 'stubby' battery is a great alternative to using a regular sized Ni-Cad battery, such as Hawk-Woods' SNP-29. The SNP-29 will provide 29Watts of output, so as well as the weight and space saving, the NP-35 will also give the user 20% more power.

With identical width and depth dimensions, the new NP-35 provides the same compatibility as the Hawk-Woods NP-65 and NP-70 batteries. It can be utilised with both their range of NP1 chargers; the MR-2/4 & SL-1, plus their extensive range NP1 shoe power adaptors.
