

More Canon Kit from Hawk-Woods

Hawk-Woods have extended their 'Canon Kit' range and can now provide a range of alternative power solutions for EOS D5 & D7 operators. Their existing series of cable-mounted Canon dummy camera batteries have been complimented with a V-Lok Power Distribution Box.

Featuring five 2-pin D-Tap sockets, they allow the user to run the camera and additional equipment from V-Mount type batteries – like the Hawk-Woods V-Lok range. These will provide the operator with a huge amount of portable power. Available with either 12V regulated or unregulated outputs, the VL-DC5 or 5X, are perfect for those with a set-up that includes a camera, dual monitors and HDMI splitter.

The VL-DC Power Boxes can be rod mounted using Hawk-Woods new mounting kit (DC-15A). Compatible with 15mm (60mm pitch) bars, the kit allows the Boxes to be vertically or horizontally mounted. Alternative mounting solutions are also available.

Hawk-Woods manufactures a wide range of D-Tap (Power-Con) cables that can be configured for devices connected to the VL-DC5/5X. These include Hirose, XLR and DC input options.

Hawk-Woods' Canon Kit is available from your preferred stockist now. The company can be found at this year's IBC Exhibition in Amsterdam (11.G25).
