

nanoFlash Gear from Hawk-Woods

Hawk-Woods now produces a range of camera solutions for Convergent Design's popular nanoFlash HD recorder. This includes a series of DC power cables, BNC cables, mounting options and a useful remote tally cable.

All DC cables are reverse wired for nanoFlash use only. Configuration options include 4-Pin Hirose(M) to; 4-Pin Hirose(M), 2-Pin D-Tap or 4-Pin XLR. Nano compatible BNC cables are manufactured to HD 3G standard and available in variety of lengths.

Mounting the nanoFlash on the camera has so far proved difficult, but Hawk-Woods now has some comprehensive solutions to solve this problem. The XE-60 nano plate is compatible with the mounting bracket on the Hawk-Woods V-Lok or PMW-EX camera adaptor ranges, while the XE-64 adaptor allows the HD Recorder to be fixed to the Hawk-Woods BP-EX3 adaptor (pictured).

One of the company's current best selling products is the XV-04 nanoFlash remote tally cable. This solves the problem of operating the Recorder while it is situated behind the camera operator. Compatible with Sony PMW-EX1/EX3 cameras, the remote cable has an operating button that slides over the cameras existing recording button. A cable mounted red LED shows the Drive is in use and can be positioned near the camera view finder for ease of display.

nanoFlash Gear is available from your preferred Hawk-Woods dealer now.
